

Summer Working Connections 2026

Intro to Quantum Workshop Final Assessment

- Follow the steps provided below to complete your final assessment to earn the workshop Credly badge.
- You may use any code examples provided in the workshop notebooks as necessary to implement your solution.
- Use the code block provided to enter and execute your code. The setup block is provided before the template block to support import operations in your code.
- Once completed, you can either save your notebook to your forked repo in GitHub and provide us with the URL, or download the notebook (use the Colab menu bar: File/Download/Download .ipynb) and email the download notebook to me so we can view and execute your code.
- Partial credit will be given! (don't leave anything blank)
- A minimum score of 80% is required to earn the badge.
 - Initialization + State Table (20%): correct 3-qubit superposition and pre-oracle state table
 - Oracle (20%)
 - Operator (20%)
 - Measurement (20%)
 - Complete, Working Program (20%): runs without errors; all required outputs shown

Use the object-oriented framework and classical functions described in class for your implementation

Deliverables

1. Code

- Submit a complete working program in the provided code block in the assessment notebook (refresh your repo fork, then access the notebook in the refreshed content).

2. Output
